

# Randomized Animal Study

Poster #1620

Sunday, November 13, 2005 - Hall E, C16 (9 am - 5 pm)

## Title: Mild Therapeutic Hypothermia with LRS ThermoSuit™ after Prolonged Cardiac Arrest in Pigs

Authors: Janata A., Weihs W., Bayegan K., Schratter A., Robak O., Holzer M., Frossard M., Schock R., Freedman R.J., Coté M., Losert U.M., Laggner A.N., Sterz F.

## Outcomes 8 & 9 Day Outcomes

| Overall Performance Category (OPC) | Number of Animals with Normothermic Recovery | Number of Animals with ThermoSuit™ Induced Cooling |
|------------------------------------|----------------------------------------------|----------------------------------------------------|
| 1 Normal                           | 1                                            | 8                                                  |
| 2 Moderate Disability              | 3                                            | 0                                                  |
| 3 Severe Disability                | 4                                            | 0                                                  |
| 4 Coma/Vegetative State            | 0                                            | 0                                                  |
| 5 Death/Brain Death                | 0                                            | 0                                                  |
